Continuation of 11. does NOT place the application in condition for allowance because: the Examiner respectfully disagrees with applicant's arguments.

Regarding the limitation in claim 1, "the local controller ... permitting the at least one kernel architecture to operate autonomously!" absolute, that is, there in no qualifying language. This is excessive; it's not supported. The at least one kernel is not separate and cannot separable from all other circuitry, contrary to, for example, a stand alone device having its own power to operate itself. The at least one kernel plane [e.g., 201 fing [2A, 2C] is coupled to GP Microprocessor 112 and Allocator 219 [see fig. 2A] which performs controller operations for each of the kernel planes 201a and 2011, such that they can operate independent of each other, e.g., in parallel [page 27, lines 23-25 of specification].

There is another difference in interpretation of the limitation "any other circuitry" in claims 99-101. Applicant, again, alleges that the 'any' is all and absolute; this is excessive and not supported. In light of the specification, the 'any' means a portion.

In the Remarks, applicant further discloses that the "autonomous mode" uses the internal bus 204a; this means the at least one kernel is not free from all other circuitry to operate.
